MUHAMMAD ANAS NAWAZ

Peshawar, Pakistan | anakxofficial@gmail.com | +92 302 9125349 | LinkedIn | GitHub | Portfolio

Professional Summary

Full-Stack Software Engineer specializing in production SaaS platforms and backend systems across NestJS, Node.js, React, Flutter, PostgreSQL, Redis, and Oracle Cloud. Built and launched MIKNAZ, a production fintech voucher platform for the Saudi market, owning it end to end from architecture and security through payments, performance testing, deployment, and ongoing operations.

Technical Skills

Languages: TypeScript, Dart, SQL, Python
Backend: NestJS, Node.js, TypeORM, REST APIs, WebSockets, Socket.IO, JWT
Frontend & Mobile: React, Vite, Tailwind CSS, Flutter, Riverpod, RTL/i18n
Databases & Data: PostgreSQL, PostGIS, MySQL, Redis, Redis Lua Scripting, Prisma
Cloud & DevOps: Oracle Cloud (OCI), Docker, Nginx, PM2, Cloudflare CDN/WAF/Workers, Git
Testing & API: Jest, k6 Load Testing, OpenAPI, Swagger
Integrations: Moyasar, Tap Payments, Taqnyat SMS, Cloudinary, Sentry, ZATCA E-Invoicing

Professional Experience

Full-Stack Developer – Freelance, Solo Contract **Feb 2026 – Present**
Upwork | Saudi Arabia Market *Remote*

- Architected and built MIKNAZ end to end across five milestones, including a Flutter mobile application, NestJS backend, two React dashboards, ZATCA-compliant e-invoicing, dual payment gateways, and Arabic/English RTL support.
- Engineered a zero-double-claim voucher system using Redis Lua atomic locks and PostgreSQL row locking, with transaction-safe claim processing under concurrent requests.
- Designed a strategy-pattern payment layer supporting card, Apple Pay, and STC Pay across two gateways, with HMAC webhook verification and idempotent payment-status handling.
- Hardened the platform against IDOR, CSRF, and brute-force attacks using JWT blacklisting, per-identity rate limits, CSPRNG-based OTPs, AES-256-GCM encryption, and GPS anti-spoofing; also closed a Cloudflare origin-bypass gap.
- Built 200+ automated tests and independently load-tested the platform at 200 concurrent users, achieving 152ms p95 response time, 52.1 requests/sec, and zero errors.
- Deployed and operate the production stack on Oracle Cloud (Jeddah) using PM2, Nginx/SSL, Cloudflare CDN, and Sentry monitoring.
- Audited all four codebases end to end, identifying payment and notification gaps before launch; authored a 4,911-line OpenAPI specification and handover runbook for long-term maintainability.
- Owned client communication and project scope throughout delivery, including a written Phase 2 proposal; the engagement subsequently continued through repeat contracts.

Freelancer – Backend & Full-Stack Developer **Jan 2023 – Nov 2025**
Various International Clients *Peshawar, Pakistan*

- Delivered backend and full-stack systems for international clients across SaaS/MVP, e-commerce, CRM/ERP, and booking platforms.
- Worked across backend APIs, authentication, integrations, frontend and mobile application development, and production delivery based on project requirements.

Mobile Application Developer Intern **Aug 2025 – Sep 2025**
CodeAlpha *Remote*

- Built a Flutter fitness-tracking application using Firebase Authentication and Firestore real-time synchronization, including user authentication and activity-tracking features.

Selected Projects

HS Beauty **2026 – Present**

Full-Stack Developer, Direct Client Engagement

- Built a full-stack e-commerce platform for HS Beauty (cosmetics, Pakistan) as a monorepo, with separate storefront and admin apps sharing one NestJS/PostgreSQL (Supabase) backend, Prisma ORM, and passwordless OTP customer authentication.
- Shipped guest checkout, persistent cart, and reviews, plus an admin dashboard with order management and audit logs; hardened the platform with server-side price/stock validation and tiered rate limiting.

Movr **Nov 2024 – Mar 2025**

Full-Stack Developer, Direct Client Engagement

- Built a cross-platform Flutter application using Provider and clean architecture, backed by a NestJS/MySQL/TypeORM backend.
- Implemented JWT-authenticated REST APIs and real-time tracking functionality.

Calvio Mart **Dec 2025**

Full-Stack Developer, Direct Client Engagement

- Built a full e-commerce platform using React, NestJS, PostgreSQL, and Docker, with 50+ documented REST endpoints covering core commerce workflows.
- Developed an RBAC-protected admin panel with authentication and payment gateway integration.

BM.com – Multi-Tenant Booking SaaS **Jun 2026**

Personal Project, Production-Deployed

- Built a multi-tenant booking platform on Next.js 14 and Supabase with PostgreSQL Row-Level Security for tenant isolation, unique-constraint double-booking prevention, and Stripe subscription billing.

Multi-Tenant SaaS Backend **Jan 2026**

Personal Project

- Built an enterprise-style multi-tenant backend using NestJS, PostgreSQL, Prisma, and Docker, with tenant isolation, RBAC, and JWT authentication, plus Redis/BullMQ workers for asynchronous processing.

Education

CECOS University of IT & Emerging Sciences **2021 – 2025**
BS Software Engineering *Peshawar, Pakistan*

Certifications

IBM SQL & Relational Databases 2025
AWS Academy Cloud Foundations 2024
Mobile App Development with Flutter 2024

Languages

English: Fluent
Urdu: Native
