MUHAMMAD ANAS NAWAZ

Peshawar, Pakistan | anakxofficial@gmail.com | +92 302 9125349 | LinkedIn | GitHub | Portfolio

Professional Summary

Full-Stack Software Engineer with 3+ years of experience building and shipping production SaaS and backend systems for international clients, across NestJS, Node.js, React, Flutter, PostgreSQL, Redis, and Oracle Cloud. Built and launched MIKNAZ, a production fintech voucher platform for the Saudi market, owning it end to end from architecture and security through payments, load testing, deployment, and ongoing operations. Works fully remote and async across time zones, with direct client communication and full delivery ownership.

Technical Skills

Languages: TypeScript, Dart, SQL, Python
Backend: NestJS, Node.js, TypeORM, REST APIs, WebSockets, Socket.IO, JWT, BullMQ
Frontend & Mobile: React, Next.js, Vite, Tailwind CSS, Flutter, Riverpod, Provider, RTL/i18n
Databases & Caching: PostgreSQL, PostGIS, MySQL, Redis, Redis Lua Scripting, Prisma, Supabase
Cloud & DevOps: Oracle Cloud (OCI), Docker, Nginx, PM2, Cloudflare CDN/WAF/Workers, Git, CI/CD pipelines
Testing & API: Jest (Unit/Integration), Smoke Testing, k6 Load Testing, OpenAPI, Swagger
Integrations: Moyasar, Tap Payments, Stripe, Taqnyat SMS, Cloudinary, Resend, Sentry, ZATCA E-Invoicing

Professional Experience

Full-Stack Developer – Freelance Contract **Feb 2026 – Present**
Upwork | Saudi Arabia Client *Remote*

- Architected and built MIKNAZ end to end across five milestones: a Flutter mobile app, NestJS backend, two React dashboards, ZATCA-compliant e-invoicing, dual payment gateways, and Arabic/English RTL support.
- Engineered a zero-double-claim voucher system using Redis Lua atomic locks and PostgreSQL row locking, keeping claim processing transaction-safe under concurrent requests.
- Designed a strategy-pattern payment layer for card, Apple Pay, and STC Pay across two gateways, with HMAC webhook verification and idempotent payment-status handling.
- Hardened the platform against IDOR, CSRF, and brute-force attacks with JWT blacklisting, per-identity rate limits, CSPRNG OTPs, AES-256-GCM encryption, and GPS anti-spoofing; closed a Cloudflare origin-bypass gap.
- Built 200+ automated tests and load-tested at 200 concurrent users: 152 ms p95 response time, 52.1 req/s, zero errors. Audited all four codebases before launch and fixed payment and notification gaps.
- Deployed and operate production on Oracle Cloud (Jeddah) with PM2, Nginx/SSL, Cloudflare CDN, and Sentry; wrote a 4,911-line OpenAPI spec and handover runbook.

Backend Developer – Freelance Development Team **Mar 2023 – Oct 2025**
Contract | International Clients *Peshawar, Pakistan*

- Built 9 backend systems from scratch in Node.js/NestJS and PostgreSQL for international clients, working in client GitHub organizations through pull requests and code review: *Order, Inventory & Payment Engine; Reliable Job & Webhook Platform; Usage Metering & Billing Backend; Booking & Ticket Reservation Engine; Event Ingestion & Analytics Pipeline; Authorization & Access Policy Service; Durable Workflow Execution Engine; API Traffic Replay & Regression Platform; Geospatial Matching Engine.*
- **Commerce & billing:** prevented overselling and double-booking with PostgreSQL transactions and row-level locks plus short-lived Redis holds with TTL, and added idempotency keys so retried payment and usage requests were never charged twice.
- **Async processing & reliability:** built Redis/BullMQ queues with retries, exponential backoff, and dead-letter queues; HMAC-signed webhooks; persisted workflow state so long-running jobs resume after crashes; and batched writes for high event volume.
- **Security & platform:** implemented JWT auth with RBAC and policy checks through NestJS guards, replayed captured API traffic against new builds to catch regressions before release, and used PostGIS spatial indexes for fast nearby-provider matching.
- **Engineering practice:** modular NestJS domain modules, schema design with versioned migrations (TypeORM/Prisma), query tuning and indexing, Jest unit and integration tests, Swagger/OpenAPI docs, Dockerized builds, and post-deployment smoke tests.

Mobile Application Developer Intern **Aug 2025 – Sep 2025**
CodeAlpha *Remote*

- Built a Flutter fitness-tracking app with Firebase Authentication and real-time Firestore sync.

Student Software Developer **Mar 2024 – Jul 2025**
CECOS University *Peshawar, Pakistan*

- Fixed the university's slow internal system by adding a Redis caching layer in front of the database, significantly reducing response times under load.
- **Movr (Final Year Project, Nov 2024 – Mar 2025):** solo-developed a cross-platform Flutter app (Provider, clean architecture) with a NestJS + MySQL + TypeORM backend, JWT-secured REST APIs, and real-time tracking, delivered for an external client.

Selected Projects

HS Beauty – E-Commerce Platform (Pre-launch) **2026 – Present**
Full-Stack Developer, Direct Client Engagement *Pakistan Market*

- Built a monorepo with separate React storefront and admin apps on one NestJS + PostgreSQL backend (Prisma ORM), with passwordless OTP login for customers and role-gated admin access.
- Shipped guest checkout, persistent cart, discount pricing, and server-validated orders, plus an admin order workflow: COD auto-confirms, online payments (bank transfer, Easypaisa, JazzCash) wait for admin approval, with transactional emails via Resend.
- Cut product image size by 92.6% with Cloudinary transforms, and dropped admin API calls per screen from 8–9 to 3–4 through request caching, Prisma query consolidation, 5 new database indexes, and an N+1 query fix.
- Designed the launch infrastructure: a self-hosted Docker stack (PostgreSQL, GoTrue auth, NestJS) on Oracle Cloud replacing managed Supabase.

BM.com – Multi-Tenant Booking SaaS **Jun 2026**
Personal Project, Live Demo

- Built on Next.js 14 and Supabase with PostgreSQL Row-Level Security for tenant isolation, unique-constraint double-booking prevention, and Stripe subscription billing.

Multi-Tenant SaaS Backend **Jan 2026**
Personal Project

- Built an enterprise-style backend with NestJS, PostgreSQL, Prisma, and Docker: tenant isolation, RBAC, JWT auth, and Redis/BullMQ workers for async processing.

Calvio Mart – E-Commerce Platform **Dec 2025**
Full-Stack Developer, Direct Client Engagement

- Built a full e-commerce platform with React, NestJS, PostgreSQL, and Docker, with 50+ documented REST endpoints covering core commerce workflows.
- Developed an RBAC-protected admin panel with authentication and payment gateway integration.

Education

CECOS University of IT & Emerging Sciences **Oct 2021 – Oct 2025**
BS Software Engineering *Peshawar, Pakistan*

Certifications

IBM SQL & Relational Databases 2025
AWS Academy Cloud Foundations 2024
Mobile App Development with Flutter 2024

Languages

English: Fluent **Urdu:** Native
